

FOR IMMEDIATE RELEASE

The T2C3 Group, Inc. to unveil Superior Tactical Command and Control Platform at this year's Force Protection Equipment Demonstration (FPED5).

Washington, DC, April 13, 2005 The T2C3 Group, Inc. announced today that they will be officially unveiling their new Tactical Command and Control Platform. This integrated tactical solution has immediate applications to military and homeland security.

The T2C3 Group, Inc. promises to be one of the highlights of this year's FPED5, held at Quantico Marine Corps Base 26-28 April 2005. See command and control configurations that range from a one-person workstation to fully operational secure tactical command and control centers that are highly portable, lightweight, and offer superior capability and interoperability.

"This is the missing link" said company President Stephen "Pete" Harvey. "T2C3 is not a single product but an integrated solution. This fully scalable open architecture is the missing link between getting critical information to and from the large deployable command and control centers to the soldiers in the field effectively and timely, and that saves lives".

This command and control platform can be easily configured to meet mission specific requirements for military, homeland security, or any organization that needs secure tactical command and control capabilities. This is a tactical solution and not a "deployable" command and control center like the big systems integrators do.

For over 13 years US Military and Intelligence organizations have come to rely on the tactical computer and communications solutions of The T2C3 Group, Inc. and its technology partners.

With headquarters in El Paso, TX, The T2C3 Group, Inc. is a growing leader in defense, government and commercial tactical communications, and other related mission support equipment and technology.
